

Low Density Lipoprotein (LDL-C) Control

*This measure is to be reported for all patients aged 18 years and older with Ischemic Vascular Disease — a minimum of **once** per reporting period*

Measure description

Percentage of patients aged 18 years and older with Ischemic Vascular Disease who had most recent LDL-C level in control (less than 100 mg/dl)

What will you need to report for each patient with Ischemic Vascular Disease for this measure?

If you select this measure for reporting, you will report:

- The most recent LDL-C level
 - LDL-C < 100 mg/dL OR
 - LDL-C ≥ 100 mg/dL

What if this process or outcome of care is not appropriate for your patient?

Some measures provide an opportunity for the physician or eligible health professional to document when a process or outcome of care is not appropriate for a given patient (also called performance exclusions). Because this measure is applicable to most if not all patients, there are no allowable performance exclusions.
