

Use of Aspirin or Another Antithrombotic

*This measure is to be reported for all patients aged 18 years and older with Ischemic Vascular Disease — a minimum of **once** per reporting period*

Measure description

Percentage of patients aged 18 years and older with Ischemic Vascular Disease with documented use of aspirin or other antithrombotic

What will you need to report for each patient with Ischemic Vascular Disease for this measure?

If you select this measure for reporting, you will report:

- Whether or not you documented patient use of aspirin or another antithrombotic therapy

What if this process or outcome of care is not appropriate for your patient?

Some measures provide an opportunity for the physician or eligible health professional to document when a process or outcome of care is not appropriate for a given patient (also called performance exclusions). Because this measure is applicable to most if not all patients, there are no allowable performance exclusions.
