

Suicide Risk Assessment

*This measure is to be reported at **each visit** during the reporting period for all patients aged 18 years and older with MDD.*

Measure description

Percentage of patients aged 18 years and older with a new diagnosis or recurrent episode of MDD who had a suicide risk assessment completed at each visit during the measurement period

What will you need to report for each visit for patients with MDD for this measure?

If you select this measure for reporting, you will report:

- Whether or not you assessed for suicide risk

What if this process or outcome of care is not appropriate for your patient?

Some measures provide an opportunity for the physician or eligible health professional to document when a process or outcome of care is not appropriate for a given patient (also called performance exclusions). Because this measure is applicable to most if not all patients, there are no allowable performance exclusions.
