

Comprehensive Preoperative Assessment for Cataract Surgery with Intraocular Lens (IOL) Placement

*This measure is to be reported **each time** a cataract surgery with IOL placement is performed for patients aged 18 years and older during the reporting period. It is anticipated that clinicians who perform the cataract procedure will submit this measure.*

Measure description

Percentage of patients aged 18 years and older with a procedure of cataract surgery with IOL placement who received a comprehensive preoperative assessment of 1) dilated fundus examination; 2) axial length, corneal keratometry measurement, and method of IOL power calculation; and 3) functional or medical indication(s) for surgery prior to the cataract surgery with IOL placement within 12 months prior to cataract surgery

What if this process or outcome of care is not appropriate for your patient?

Some measures provide an opportunity for the physician or eligible health professional to document when a process or outcome of care is not appropriate for a given patient (also called performance exclusions). Because this measure is applicable to most if not all patients, there are no allowable performance exclusions.

What will you need to report for each patient undergoing a cataract surgery with IOL placement for this measure?

If you select this measure for reporting, you will report:

- Whether or not you performed a comprehensive preoperative assessment within 12 months prior to cataract surgery with IOL placement. The assessment includes: 1) dilated fundus examination; 2) axial length, corneal keratometry measurement, and method of IOL power calculation; and 3) functional or medical indication(s) for surgery
