

Low Density Lipoprotein Cholesterol (LDL-C) Control in Diabetes Mellitus

*This measure is to be reported for all patients aged 18 through 75 years with diabetes mellitus — a minimum of **once** per reporting period.*

Measure description

Percentage of patients aged 18 through 75 years with diabetes mellitus who had most recent LDL-C level in control (less than 100 mg/dL)

What will you need to report for each patient with diabetes mellitus for this measure?

If you select this measure for reporting, you will report:

- The most recent LDL-C level
 - LDL-C < 100 mg/dL OR
 - LDL-C 100-129 mg/dL OR
 - LDL-C ≥ 130 mg/dL

What if this process or outcome of care is not appropriate for your patient?

Some measures provide an opportunity for the physician or eligible health professional to document when a process or outcome of care is not appropriate for a given patient (also called performance exclusions). Because this measure is applicable to most if not all patients, there are no allowable performance exclusions.
