Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy for Patients with Coronary Artery Disease and Diabetes and/or Left Ventricular Systolic Dysfunction (LVSD)

Note: There are two reporting criteria for this measure

Reporting Criteria 1

Patients who have coronary artery disease and also have LVSD

OR

Reporting Criteria 2

Patients who have coronary artery disease and are also diabetic

If a patient has both diabetes and LVSD, reporting criteria #2 will count as appropriate reporting for this patient.

Coding Specifications

Reporting Criteria 1 — For patients with CAD and LVSD

Codes required to document patient has coronary artery disease and a visit occurred:

A line item ICD-9-CM diagnosis code for coronary artery disease and a CPT E/M service code are required to identify patients to be included in this measure.

All measure-specific coding should be reported ON THE SAME CLAIM.
